RE: Production of FasLig Antibodies in Rabbits

Dear Cindy,

Encloses are 2 tubes of FasLig protein, a fusion protein, for antibody production in 2 rabbits. One tube is an acrylimide gel fragment at a concentration of 0.5mg/ml. The other tube contains the protein at a concentration of 0.25mg/ml in a buffer containing Imidazole. Sodium Phosphate, Sodium Chloride and glycerol and should be acceptable for direct injection. Both tubes have been labeled with the appropriate name, concentration, and either as an acrylimide gel slice or in imidazole buffer. Please use your standard protocol for Fusion Protein Antigens for antibody production.

If you need more protein in the future, please don't hesitate in contacting me.

Sincerely,

*Ann M. Kim*
